

# WHAT CAN THE ZEUS® SECURITY MONITOR OFFER YOU?

- » **Real-time security:** The ZEUS® Security Monitor allows for immediate localisation and visualisation of threats in real time. This means that potential threats are immediately detected and measures are automatically initiated to respond to them promptly and appropriately.
- » **Smart alarms:** If, for instance, an object prevents a door from closing properly, the Security Monitor not only informs visually about the event, but can also trigger a message informing designated people via email or push notification on their personal smartphone.
- » **Efficient access control:** The Security Monitor is not only designed to display information, but also to actively interact with the Access Control system. For instance, the Security Monitor can be used to reliably control a surveillance camera or to lock or open doors and gates.

- » **Seamless integration:** The ZEUS® Security Monitor can be seamlessly integrated into the ISGUS Access Control solutions and easily implemented into both existing and new security concepts.
- » **Quick operational readiness:** The pre-configured Security Monitor can be put into operation quickly and with minimum effort.
- » **Comprehensive logging:** All events, access attempts and measures are accurately logged and documented for later evaluation and verification.
